Blumira For Healthcare

SIEM, DETECTION & RESPONSE FOR HIPAA COMPLIANCE

Blumira offers a Security Information and Event Management (SIEM) platform that helps healthcare providers and their business associates comply with the HIPAA Security Rule by protecting electronic protected health information (ePHI) with administrative, physical, and technical safeguards. This paper explores the benefits of using Blumira's SIEM platform to help business associates satisfy commonly overlooked aspects of the HIPAA Security Rule.

HIPAA SECURITY RULE & BUSINESS ASSOCIATES

Business associates are obligated to comply with the same requirements as covered entities under the HIPAA Security Rule. Failure to comply can result in hefty fines and damage to a business associate's reputation. Blumira's SIEM platform ensures that business associates understand their obligations and take the necessary steps to comply with the HIPAA Security Rule.

THREAT DETECTION & HIPAA SECURITY RULE COMPLIANCE

Blumira's SIEM platform collects and centralizes your system logs, providing real-time analysis of security alerts and events. It also offers Endpoint Detection and Response (EDR) capabilities to identify and respond to security threats on individual devices. By monitoring and managing network security, access management, audit controls, transmission security, and risk assessments, Blumira's SIEM platform satisfies commonly overlooked aspects of the HIPAA Security Rule.

ACCESS MANAGEMENT

Blumira's SIEM platform helps business associates manage access to ePHI by monitoring user activity and identifying unusual patterns that could indicate a potential security threat. It also provides real-time alerts when unauthorized access attempts occur, enabling rapid response and remediation.

AUDIT CONTROLS

Blumira's SIEM platform provides real-time monitoring of network activity and generates reports that show who has accessed ePHI, when, and from where. This information can be used to identify and investigate suspicious activity, as well as to demonstrate compliance with HIPAA requirements.

TRANSMISSION SECURITY

Blumira's SIEM platform ensures transmission security by monitoring network traffic and identifying potential security threats in real-time. It can also detect and prevent unauthorized sharing of confidential information.

OTHER REQUIREMENTS

Blumira's SIEM platform also assists with the implementation of policies and procedures for information security management, which includes risk analysis and management, workforce security, and contingency planning. It helps identify and prioritize potential risks and vulnerabilities in systems and networks, detects anomalous behavior and potential security incidents, monitors access to ensure only authorized personnel have access to ePHI, and provides rapid detection and response in the event of a security incident or system failure.

Blumira

CONCLUSION

Blumira's SIEM platform is a powerful tool for achieving HIPAA Security Rule compliance for business associates. It helps ensure the confidentiality, integrity, and availability of ePHI, as well as protect against data breaches and other security incidents. By providing access management monitoring, audit controls, risk analysis, workforce security, and contingency planning, Blumira's SIEM platform satisfies commonly overlooked aspects of the HIPAA Security Rule.

BLUMIRA FOR HEALTHCARE

Blumira is a cloud-based security platform that provides an all-in-one Security Information and Event Management (SIEM) and endpoint visibility solution specifically designed for small to medium-sized businesses (SMBs). Blumira's mission is to make enterprise-level security accessible and affordable to SMBs, who may not have the resources or expertise to implement and manage traditional SIEM and EDR solutions. In fact, Blumira is the first company to provide such a comprehensive security solution specifically for SMBs, enabling access to enterprise-level security for businesses of all sizes.

By using Blumira's SIEM and endpoint visibility solution, SMBs can achieve HIPAA Security Rule compliance and protect their electronic protected health information (ePHI) from unauthorized access, data breaches, and other security incidents. Blumira provides access management monitoring, audit controls, transmission security, risk analysis, workforce security, and contingency planning, all in one platform. With real-time monitoring and alerts, SMBs can quickly respond to potential security threats and mitigate risk.

In addition, Blumira's solution is easy to use and requires minimal setup, making it accessible to SMBs with limited IT resources. It is also cost-effective, with affordable pricing plans that are tailored to the needs and budgets of SMBs. With Blumira, SMBs can now benefit from enterprise-level security tools without breaking the bank.

Overall, Blumira is a game-changer for SMBs looking to achieve HIPAA Security Rule compliance and protect their ePHI. Its comprehensive and affordable SIEM and endpoint visibility solution, combined with its ease of use and real-time monitoring, makes it the ideal solution for businesses of all sizes looking to enhance their security posture.

THE BLUMIRA VALUE

Get easy, effective and usable security to defend against breaches and ransomware, while meeting compliance and cyber insurance requirements, with one year of data retention.

Blumira's **all-in-one SIEM** platform combines logging with endpoint visibility, detection and response for better security outcomes with 24/7 SecOps Support.

THE BLUMIRA DIFFERENCE:

✓ **EASILY MEET COMPLIANCE**

With a year of data retention and deployment that takes minutes to hours, we help you meet cyber insurance and compliance easily and quickly with the team you have today.

✓ **FASTER TIME TO SECURITY**

Our unique approach to detections notifies you of threats other security tools may miss, sending you real-time alerts in under a minute of initial detection to help you respond to threats faster than ever.

✓ **AUTOMATE TASKS FOR YOU**

We do all the heavy lifting for your team to save them time, including parsing, creating native third-party integrations, and testing and tuning detection rules to reduce noisy alerts.

> *We chose Blumira for its simplicity*
> *– I needed a solution that would simplify, consolidate and show me what I really need to see.*
